Dear Mokka users,

A change was made in the composition of model LDC01\_05Sc: sub-detector tpc07 was replaced by the new tpc08 implemented by Steve Aplin. The change was made in the central DB, so in order to build model LDC01\_05Sc as specified by this central DB, you'll need to checkout the head of Mokka (containing new driver tpc06) and re-compile Mokka.

Cheers, Gabriel
