Dear Colleagues,

we would like to look at b quark production in the 250 GeV samples as produced for the DBD, e.g.

`lfc-ls /grid/ilc/prod/ilc/mc-dbd/ild/rec/250-TDR_ws/2f_Z_hadronic/ LD_o1_v05/v01-16-p10_250`

We are wondering whether these files were produced with or without gamma gamma background. I assume that they are with the background as there is nowhere a corresponding label. Does there exist also files w/o gamma gamma background? From a quick scan through the grid directories, I could not figure out corresponding files but maybe I have missed something.

We (or better said Sviatoslav) are capable of running the reconstruction ourselves but would of course prefer centrally produced files.

Thanks in advance for advice and help and Merry Christmas,

Roman
